OUR PROTOTYPE

A splint made for one astronaut

Our value: OrthoPrint gives an injured astronaut a splint made for their own ankle, printed on the lunar base and strapped on with one hand.

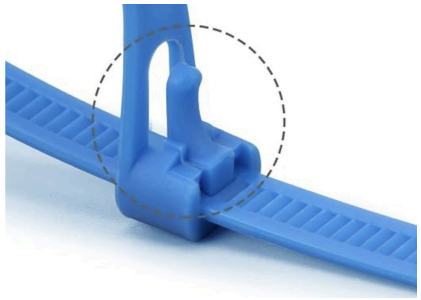

Strap, front

OTHER DESIGN FEATURES

Details & next steps

Detail drawing, dimensions in mm · Jose

Materials

PLA · ABS · TPU · PETG

CF-PEEK for flight

Size	460.59 mm tall, side plates 144 mm apart
Fit	Unlatches and goes on from above
Shell	Solid TPU wall, firm but moulds slightly

Next steps

- ○ Test strap thickness and break load
- ○ Find where the filament softens with heat
- ○ Build prototype #2 for the CDR

Gladys Porter Early College High School
Brownsville, Texas

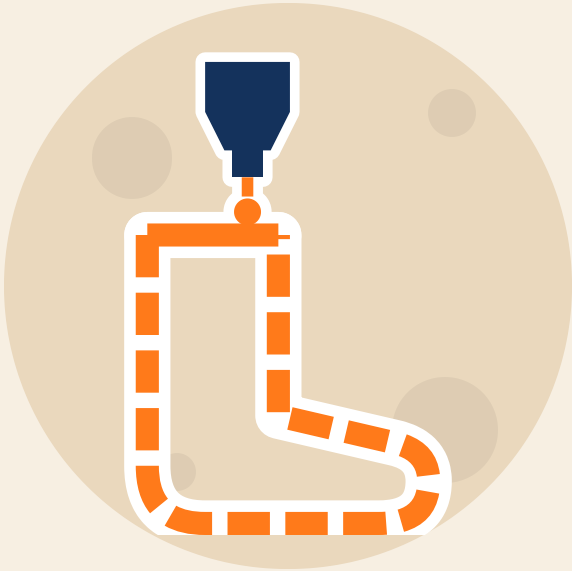

A student design project. Not a medical device.

LUNOVA

NASA HUNCH · LUNAR SPLINT DESIGN CHALLENGE

OrthoPrint

A custom-fit ankle splint, 3D-printed on the Moon.

PROTOTYPE HIGHLIGHTS

How we got here

1 Research

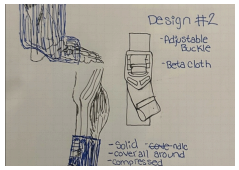

Surveyed 56 students and studied braces with our school's athletic trainer.

Trainer's ankle brace

2 Brainstorming

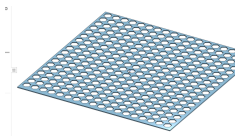

Sketched a one-size cast, then a two-piece splint with a buckle.

Concept sketches

3 Design

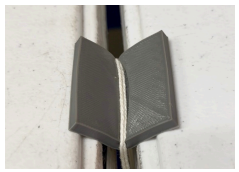

Drew hole patterns and test samples in CAD.

CAD test sample

4 Testing

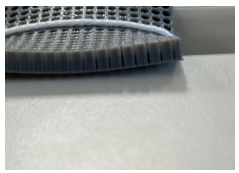

Hung weights on PETG and TPU samples. The holes split the layers.

Hanging-weight test

5 Prototype

Chose a solid TPU wall with zip-tie straps at key points.

Solid TPU wall

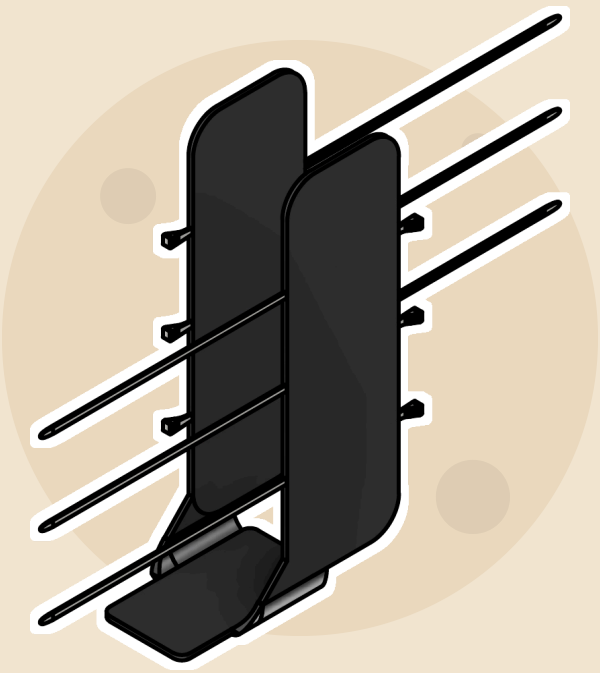

WHAT MAKES IT UNIQUE

Built for the Moon

1 Single-piece ratchet closure
Tightens or releases with one hand. No loose parts to lose.

2 Integrated hygiene
Comes off to clean the splint and check the skin.

3 Thermal phase design
Flexible to put on, firm to hold the ankle still.

Our 3D CAD (isometric) · Jose

BEYOND THE REQUIREMENTS

More than the challenge asks

3	lunar innovations, where the challenge asks for one
1	splint per patient, custom-fit from a scan instead of fixed sizes
56	students in our Needs Assessment Survey, plus an athletic-trainer interview
4	print materials tested, with CF-PEEK picked for flight

What our survey told us

Ankle injured most	**63%**
Hard to find a fit	**54%**
On their feet a lot	**96%**
Devices help healing	**98%**

Why the Moon needs it

$1,000	to launch every gram, so no box of spare sizes
Days	for a ride home, so the crew makes the splint on site
